necessary corrections.

Note:

To correct the sequence listing errors noted in this report - The
recommended method for correction of errors is to access the sequence
listing working file using the software program in which the listing was
originally prepared, e.g., the project file in Patent In, make any
necessary corrections within that program, then generate a new sequence
listing file. Use of a word processing program to correct errors
directly in the original sequence listing file is strongly discouraged,
since such programs often introduce unintended changes to the sequence
listing, rendering the listing unacceptable. When the working file or
original program is not available for correction, then use of a common
or plain text-only editor, such as Notepad, to edit the original
sequence listing file may suffice.
